

Project 1 Week 2: Clean, Summarize, Explore

Section: _____

Group: _____

Name: _____

BUID: _____

Work through this sheet together, then submit at the end of the lab.

1. Starting point (everyone)

From your outline: response _____ predictors _____

2. Cleaning log (A)

Record every change you make to the data. If a row of this table is not in your R script, it did not happen.

Issue found	Variable	What we did, and why	Rows affected
-------------	----------	----------------------	---------------

Examples: missing values, a number that stands for a category, impossible values, a new variable (ratio, unit change, log), a reference level.

3. Summaries (B)

Response: mean _____ median _____ SD _____ min _____ max _____

Response by a categorical predictor (_____):

Group	n	Mean	Median	SD
-------	-----	------	--------	----

4. Plots (B)

List the plots you will put in the Google Doc. Every axis needs a label and units.

Plot type	Variables	What it shows about the question
Histogram of response		
Scatterplot		
Boxplot by group		

5. What should we fit in Part 3? (C)

- ☐ The response against the main predictor looks linear / curved / no clear pattern.
- ☐ Two predictors are highly correlated ($|r| > 0.8$): _____
- ☐ The relationship seems to differ across groups of _____

Three candidate models (write them as $y \sim x_1 + x_2$):

(i)

(ii)

(iii)

6. Research question

Our primary question, revised if the EDA changed it (name the response and predictors):

7. Plan for next setps
